

In order to sustain the growth of the company Delphi Genetics is recruiting a **Senior Scientist**

Position Summary:

The Senior Scientist in research & development plays a key role in the development of innovative bioproduction at Delphi Genetics.

The successful applicant will work as a senior team member of the R&D department in the development of innovative nucleic acids production and purification processes (plasmid DNA for gene therapy) in support of GMP (Good Manufacturing Practice) production. The incumbent is expected to work hands-on at the bench while providing strong technical leadership to project teams within the discipline of biological manufacturing science.

The Senior Scientist is expected to work with a high degree of autonomy in the discipline and work on project in bacterial fermentation, bacterial strain & plasmid development, purification process, and bioanalytical science.

To be successful, the applicant will have advanced knowledge in molecular biology, in plasmid DNA / RNA production and chromatographic / filtration processes for purifying nucleic acids from bacteria.

Position Responsibilities:

- Benefiting of autonomy, develop and optimize bacterial strains & plasmids, innovative & robust production and purification processes for plasmid DNA / RNA.
- Support the production and quality control teams in development of new technical solutions
- Author protocols, study reports, and technology transfer documents that will support technology transfer within the company or to contract manufacturers.
- Coach and mentor junior colleagues and provide direction to contingent workers and contractors.
- Strive for continuous improvement by streamlining existing workflows to increase efficacy

What we offer:

- A motivating job with direct impact on Delphi Genetics development
- An opportunity to work in a young, enthusiastic team in a fast growing company
- An attractive salary package in line with your experience
- Undetermined term contract
